

COURSE OBJECTIVES

1. Describe the diagnosis and treatment options, including angiogenesis therapy for children and young adults with osteosarcoma.
2. Discuss the evidence-based practice standards and the nurse's role in the safe handling and administration of chemotherapeutic agents.
3. List the common implications and treatment regimens for adolescents and young adults diagnosed with melanoma.
4. Describe the interventions that can be implemented to promote health and well-being in the aplastic anemia population.
5. Identify ethical methods of symptom management, including terminal pain strategies, in the pediatric palliative care setting.
6. Discuss the common bacterial, viral, and fungal infections compromising the care of pediatric oncology patients and new therapeutic interventions for their prevention and treatment.
7. Identify some key strategies designed to increase compliance with oral medications in the pediatric leukemia population.
8. Discuss the current state of healthcare and the future of healthcare reform along with its impact on nursing practice.
9. Describe and discuss the problems faced by female pediatric cancer survivors as it relates to fertility and other endocrine related long-term side effects.
